

Data Visualization Exercise 2.3

1. Pie chart:

[Data visualization 2.3 | Tableau Public](#)

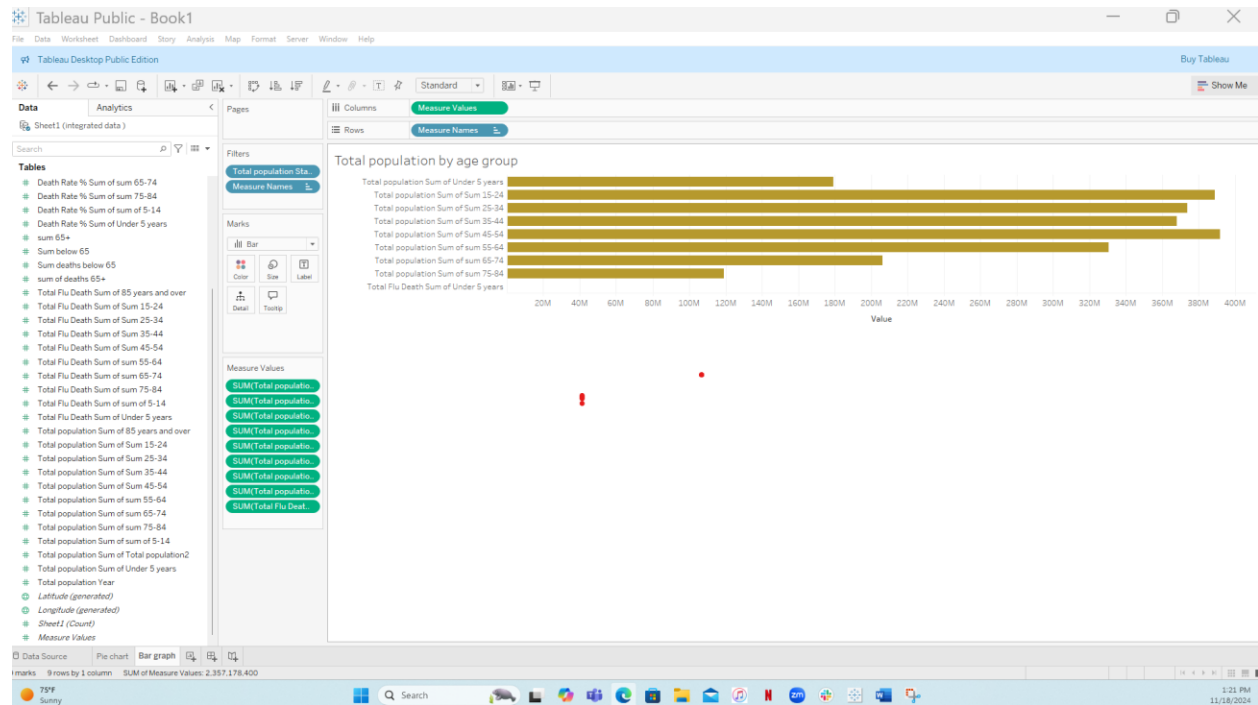

Pie chart would be a good visualization choice because we need to display the comparison of two variables considering that this type of chart is better suited for three or fewer variables. And the pie chart clearly demonstrates the dominance of one of them.

2. Bar Graph

[Edit | Data visualization 2.3](#)

The Column chart displays, The total population for each age group

3. Tree map.

[data Visualization 2.3 pat 2 tree | Tableau Public](#)

The tree map chart is suitable for displaying the distribution of total population by state as a part of a whole. We can categorize the states by total population and visualize this using different sized squares and group the states using different colors. However, I don't know why the blanks do not show the written information out, I'm guessing because the space is too small, to label clearly.
